# CHS - WHO WE ARE

Worldwide transport services: Close co-operation with our global network of trusted partners. Transport services cover all forms of transport: air freight, sea freight, road freight and rail freight. Comprehensive freight forwarding services including all the necessary customs documentation and customs clearance covering all customs procedures.

Special expertise: In logistics services related to Finland, Russia, and the CIS-countries.

Project expertise: Specialised transportation solutions for oversized and heavy shipments as well as for transportation projects with a long duration – tailored individually per shipment. Our professional and experienced personnel together with our worldwide network of specialized agents provide high-class project management to the different phases of the customer's project. Strong knowledge of local project cargo suppliers e.g. special transport trucking companies, port operators, crane suppliers etc. Well-established project cargo network globally: OPCA, XLP and X2 projects.

Warehousing services: Comprehensive services for outsourced logistics with 32,000 m2 of covered warehouse space and up to 100,000 m2 of uncovered space.

# CHS - WHO WE ARE

Versatile **event and exhibition logistics**.

Specialised services in sports logistics to all events connected with sports including training, hobbies and competitions both in Finland and internationally.

CHS is the official logistics and forwarding partner to the Finnish Olympic Committee.

Temperature-controlled solutions for the food, pharmaceutical, biotechnological and clinical research in  
All shipments within the life science umbrella through CHS will be handled and shipped observing the GDP-guidelines set by the World Health Organization (WHO) and the European Union (EU) (GDP=Good Distribution Practice).

Official Partner of  
Olympic Team Finland

# PROJECT CASES

## CHS and customers – success stories in co-operation:

All day to day tasks with our customers are our highlights, but here are some of our project highlights from 2017

# PROJECT CASES

Finnish engineering and manufacturing company, one of the field's largest in the world, needed pre-carriage for a project from Finland to Latin America.

## Challenge:

Several heavy-weight shipments of a large size and extensive dimensions. Air transportation due to a tight schedule. Challenging front & rear onloading to the aircraft (AN124). Special equipment needed on the road and at the airport, e.g. heavy duty cranes. Special licences needed from the aviation authorities.

## Solution:

Due to deep knowledge of the needed tasks and regulations, CHS was nominated to execute the project in Finland. CHS established centralized project management and gathered all parties together to create an accurate project plan. Throughout the whole project constant communication with all parties supported flawless operations. High quality documentation and forwarding activities highly appreciated by the customer.

## Success:

Everything transported within – or even ahead of – the set schedule. Not a single incident or problem throughout the entire two-month-long project.

# PROJECT CASES

One of the largest Finnish industrial companies needed quick transport for a project from Finland to southern Africa.

## Challenge:

Multi-phase transport project with a tight schedule just under the holiday season at the year end. Heavy weight goods: two SOC-containers and two diesel engines weighing 82 tons each, all under one BL. Only two weeks available for preparing the departure of transport, securing availability of transport capacity and special equipment, executing official formalities.

## Solution:

CHS was nominated to execute the transport project. Based on previous experience on demanding industrial transport projects, CHS set up a goal-oriented project team, which worked on preparations and preliminary investigations in a focused and efficient way.

## Success:

Everything transported within the set schedule – ahead of the holiday season at the year end as requested.

# PROJECT CASES

One of the largest mining machinery producers in Europe needed transport for a project from Finland to Thailand.

## Challenge:

Difficult dimensions and underdeck delivery was needed for project shipment from Finland to Thailand. It was challenging to find a suitable option for high pieces of considerable height with the underdeck option which was the customer's demand.

## Solution:

CHS was nominated to handle this 102tn transport project from the supplier's door to Thailand on 1x62' + 2x40' mafis. CHS investigated all alternative BB and RORO options for the requested destination and the cargo with challenging dimensions. The solution was presented quickly to the customer together with the project's statement of procedure, routing and loading plans. The customer's engineers and installation team were kept well-informed about the shipment process and the final site ETA during the transport.

## Success:

The shipment was executed fully within the planned delivery schedule and plans. The shipment arrived to the final site in Thailand right on time so that the supplier's engineering team did not have to wait extra time before the initialisation got started.
